

Consultant

SCOCOG is seeking bids for a contracted position to work on the potential Hands-on Watershed and Karst Education in the Ozarks project.

This two-year project will offer public school teachers scientific information and teaching tools that they can use to educate youth in the Missouri Ozarks (South Central Ozark Council Of Government counties: Douglas, Howell, Oregon, Ozark, Shannon, Texas, and Wright) about watersheds, groundwater, water quality, water use, conservation, stewardship, local karst geology (caves, springs, losing streams, sinkholes), and how human actions and decisions affect water.

SCOCOG aims to contract with a consultant on this project and is seeking someone who is well-qualified to teach teachers about hands-on watershed and karst education in the Ozarks. This individual should possess a masters degree in education, with an emphasis in environmental work. This individual needs to have extensive experience doing workshops and outdoor education. This individual needs to have experience teaching both students and teachers and to have knowledge of and experience with Ozark karst features. This individual needs to have previously taught Earth Science and/or Physical Geography, and ideally Ozark Geography as well. It is expected that this will be a fixed-price contract – the contractor furnishes the services for a fixed-price. Please include the hourly rate in the proposal. Evaluations will be conducted based on length and depth of experience, as well as reasonableness of cost. Please submit your letters of interest, proposals, and resumes to Tegan Vaughn at tv Vaughn@scocog.org by September 5th, 2022.
